

## GCN and SONG and Interactions with other Instruments

Author: Scott Barthelmy

"I will give a brief description of GCN (distribution methods, filtering criteria, etc) plus the types of notices currently being distributed (GRBs, transients, & monitoring). Then cover how SONG telescopes could make use of these notice types to fill in some of their observing time. I will then make a pitch to get SONG telescopes to contribute those data products that are consistent with the real-time transient aspects of GCN."
